Description

Hi! i have uploaded the wells shape file with values in the depth field. Some of the entries are empty as there is a doubt in the data, anyhow for most of the wells we have the depth.
Giulio and i are discussing ways to represent the depth on the graph. We can for sure show the depth in the pop-up on map to start with. For showing on the graph, one simple way would be to just show a line (brown colour) on y-axis spreading throughout the graph. though this will lead to stretching of the y xis a lot in case of deep wells.then if possible, we could show the Mean sea level also(maybe in blue colour). What do you think?
