Description			
<p>There were almost 2500 point reconciliations done, but few issues in the reconciliations left the database with some issues:</p> <ol style="list-style-type: none">1. gisaf_survey.raw_survey.category was not updated. This can be done thanks to data stored in gisaf_admin.reconciliation2. the point layers (final, WGS84) were updated (old removed and new created), but not the raw survey table3. documentation is wrong/misleading, as it shows that reconciliation is done for raw survey only (https://redmine.auroville.org.in/projects/gis/wiki/Survey_data)
