Description

From category, to category: original IDS
R29, T53: 31738, 31782,31781,31737,31794,31793
V5, T53: 23510, 23511
W24, T53: 28622 To 28625
P1, T53: 50678 To 50688,51283

History

#1 - 30/09/2020 16:13 - Philippe May

As i thought initially: these points are in the RAW_V_* tables, but not in the gisaf_survey.raw_survey table.

We could manually make the changes manually in the database. But, since we don't know the reason why the points are missing, this case might reappear.

So, a more global solution is to add a new function in the admin: giving an original_id in a given RAW_V_* table, make sure that the corresponding point exists in the gisaf_survey.raw_survey table, and eventually re-create it.

#2 - 01/10/2020 13:03 - Philippe May

After deeper analysis, it might be related to #8721 (multiple survey point files imported with the same project, surveyor, equipment and date).

For example, for the VEGE_BNYN (V5) original id 23510 which was surveyed the 2018-02-09, there are 2 files: MM-2018-02-09.csv and MM-2018-02-09-Floor_Levels.csv.

Going on the analysis later.
