<b>Description</b>			
After creating the project "GBS" which stands for Government Boundary Stones, and after uploading the file GBS-2020-11-11-RTK.txt into the basket (Surveyor AVSM, Equipment RTK), while trying to import it, an error message pops up saying "Error:Unexpected import error: value too long for type characted varying(4)"			
<b>Related issues:</b>

#### History

##### #1 - 10/12/2020 00:53 - Philippe May

- Assignee changed from Philippe May to Giulio Di Anastasio

- Tracker changed from Bug to Support

The line for the point id 25 has extra blank characters at the end, which creates the issue. It should work fine if you delete these characters and retry importing.

I'll add a feature to the import functions, to automatically remove such extra blank characters.

##### #2 - 10/12/2020 01:02 - Philippe May

- Related to Feature #11449: Strip extra characters when importing survey CSV files added

##### #3 - 10/12/2020 01:07 - Philippe May

You can try with the same file, the importer should now function well even with the blank characters.

##### #4 - 10/12/2020 16:41 - Giulio Di Anastasio

- Status changed from New to Closed

It works fine, thanks a lot
