Description			
<p>I have just noticed on the CSR weather Station Dashboard that the CSR Weather Station did not record any data other than the pressure, from 6 pm on the 3rd of October 2021, till 8 am on the 4th of October 2021. To Philippe: kindly check if those data can be retrieved and stored into the database. Thanks, Giulio</p>

Checking at <https://ambientweather.net/dashboard/86cf01d217ae236c27e3267a625fb07f/graphs> : there's no more data that what we have for this period.

One idea: it looks like the console WS loses connection at night. I don't remember, but the pressure sensor might be in the console, that would explain that the pressure is recorded (other values coming from the console, inside temperature and humidity are discarded).

So, the fix would be to replace the battery on the WS. I'm currently TOS, back the end of the week. Giulio, can you coordinate with Vijay?
