Fixed: mail received from veeramani@aurovilleconsulting.com at 16:42:

Dear All,

Thanks for the notification and sorry for not noticing it.

The wifi couldn't reach the corner where the Console was kept. I have replaced the console to a centralized place where wifi is reachable and also the signal from the outdoor device can reach.

It was a bit difficult to find the place because the signal from the outdoor device couldn't reach penetrating the barriers in its way.

I have reconnected the wifi and can see the signal from the outdoor unit. I can see the weather station is back online.

Best regards,
Veera
