Jupyter notebook for runoff calculation: kernel not connecting

31/12/2021 15:02 - Giulio Di Anastasio

Description

Dear Philippe,

I tried to re-run the jupyter notebook to update the runoff model with all data from the survey done in the last 2 years.

I opened the notebook, and then tried to restart the kernel and then re-run the whole notebook: but it does not work, and the icon in the upper-right corner tells me that the kernel is disconnected, even after trying several times...

Perhaps you can guide me on this...

Thanks

Happy New Year

Giulio

History

- File runoff notebook screenshot.jpg added

Attached screenshot of the icon with pop-up saying that the kernel is disconnected...

#2 - 31/12/2021 15:35 - Philippe May

- Assignee changed from Philippe May to Giulio Di Anastasio

I just tried to open the notebook and could not replicate the problem: Jupyter icon tells "Kernel idle" and the cells can be processed (up to some point, that we can see later).

Happy new year to you too... But last time someone wished me a happy new year, the whole thing went quite bad
