Found that there is network/electrical work in CSR.

But the server had network connectivity when i reached. Probably a temporary disconnect due to work going on.

Then we got a 502 error. After a quick check the problem came from the database which could not start because of disk full on that domU. Database backups tend are not zipped and exceeding 4 GB.

Extend the LV (not showing here shutdown and restart of the domU):

```
1018 2022-08-03 12:26:50 lvextend /dev/dream.csr/gisdb.csr.av-disk -L+5G
1024 2022-08-03 12:28:27 e2fsck -f /dev/dream.csr/gisdb.csr.av-disk
1025 2022-08-03 12:28:30 resize2fs /dev/dream.csr/gisdb.csr.av-disk
```

Restart, check services, free space on gisdb: OK.
