Weather station levels: which WS?

17/11/2016 12:27 - Philippe May

Status:	Closed	Start date:	17/11/2016

Description			
In the weather station "levels" files (ex: 2016_aws_raw_data.xlsx), there's no indication which weather station it is related to.			
There's only one WS right now (shape file still pending), but we'll need to consider there will be a couple, so we need a tag somehow which one the measurements are from.			
This id (foreign key to the WS geographical table from the shape file) can be inside of Excel, or included in the file name (ex: 2016_aws_raw_data-1.xlsx). You can take the most convenient option.

Ping?

#2 - 15/12/2016 12:16 - Philippe May

As discussed: same formalism as raingauge: add a suffix on the file name.
The first sheet to be created with the id of the raingauge in cell B1

- Status changed from Resolved to New

I don't remember why we closed this ticket: the files in http://server.gis.av/admin/dataimportbasketadmin/b/weather_station_levels still do not have the weather_station_id in cell B1 of the first sheet.

So, reopening the ticket.

Dear Philippe,
I just uploaded the weather station data into the basket.
They refer to weather station id=1, I mentioned it in the file name as well as in the first sheet of the excel file, for your convenience.

I am now trying to find a way to have Akash's data in the same format...

Waiting for your kind reply

Giulio
