Description

All shapefiles have a res_id field, which should be matching a resident. Eg, the shapefile for well mention res_id 1738, 2093, etc. Who are those?

We need a resident list (csv is ok) to be imported in the residents table in the DB. Columns should be at least:
- res_id
- name

Optional:
- master list number
- asyncto id

Asyncto would be useful for later: get the contact (tel, mail) from the AV directory.

History

#1 - 21/12/2016 12:34 - Giulio Di Anastasio

- File residents.csv added

Dear Philippe,
I am replying here to your ticket #3371 about residents list, hope I am doing it right!

So, I made a csv file with the fields
1. id
2. loc_id
3. name of the resident
4. landline number
5. mobile number
6. email id

I compiled these data from the directory, hope it is ok for you
I attache the csv file herewith

Please let me know how to name the fields, and if otherwise the file is ok

Thanks

Giulio

Yes, the comment is in the right place +1.png

Will do try to import.
