<b>Description</b>			
The connection to the server from a computer on optic fibers network requires the file "hosts" (Windows) to be edited in order to access.			
A different way to connect to the server is needed so not to ask users to change their computer settings, to prevent unpleasant misdoings...

- Status changed from New to Closed

Closing this long pending issue, which was solved long time ago by setting up a local DNS, and configuration of the DHCP service on routers to use it.
