<b>Description</b>			
Not quite able to understand this problem. This layer was defined as polygon type in GISAF wrongly and i changed it to line type. then there is an error while importing it, attaching the screenshot of the error. thanks!			

#### History

- Status changed from New to Rejected

1. Changing the geometry type in categories doesn't change the definition of the table. So the table would need to be deleted manually (eg. in pgadmin), then gisaf would recreate the tables. It's in the plan to make all these mechanisms user friendly, but there are so many things to consider that it's not a priority.
2. The geometry type of this specific layer was actually changed to polygon.
