Description The <i>notes</i> field is a free text, that is not meant to be processed, only stored for reference. The <i>tags</i> field is also free text, but carry some information for classification. Use cases: <ul style="list-style-type: none">- surveyors can add a note in the field for each point- surveyors can add a tag, that can be used later for classification- while doing line work, one can add notes or tags to the shapefile This ticket involves: <ul style="list-style-type: none">- adding a <i>notes</i> field to all models (custom and auto, ie. from categories, ie. V_* and RAW_V*)- tags are discussed in another ticket. For tags, it might make more sense to store them in a specific table.

Tags are implemented (see [#6582](#)).

Now, i'm not sure if a specific "comments" field makes sense any more: eg. we could have a tag with key: note.

So, marking this ticket resolved, can be reopened, eventually.
