Description			
Mail from Gilles dated 13.11.2018			
Dear Meera,			
Please find attached the consolidated table I made. I have added the daily workers in communities where it is not mentioned.			
As a comment on your table, it is necessary that you include the calculation in your data sheet to avoid mistakes. So, the steps are data collection, table generation, then calculation. As well, when you update a table and send it around, you should mention the version that one can keep track.			
From my table you can start to work out the estimated domestic water demand and wastewater generation. You can start with 135lcd ,apart of HumanScapes (see earlier email from Suhasini where she gave details). The WW generation will be typically 90% of water demand.			
Warmly
