<b>Description</b> Dear Philippe, Gisaf server looks like not working...			

### History

#### #1 - 06/05/2019 15:45 - Philippe May

- Status changed from New to Resolved

In short: temporary hardware glitch, probably. Fixed now.

Technical details (TL;DR)

Hard drive issue, apparently. The host responded OK, but could not log in to any VM.

I shut down the VMs with virtual machine manager. Before that, all showed error messages in their console, but (later) nothing found in syslogs: as if the whole LV switched to read only.

Just did that on the physical machine:

```
/dev/disk/by-id/dm-name-dream.csr-jupyter.csr.av--disk: clean, 296587/655360 files, 2073701/2621440 blocks
```

Restarted the VMs: OK

Installed SMART, all drives look fine.

No further action required, just keeping this incident logged for future reference.
