Gisaf - Bug #8248

Websocket config: manage scheme (ws and wss)

06/05/2019 19:04 - Philippe May

Description

A quick test with Aurinonco infrastructure indicates that websockets seem to pass through, but the web browser doesn't want to connect:

```
Failed to load resource: net::ERR_INSECURE_RESPONSE
Mixed Content: The page at 'https://gis.auroville.org.in/map' was loaded over HTTPS, but attempted
 to connect to the insecure WebSocket endpoint 'ws://gis.auroville.org.in/gj/live'. This request h
as been blocked; this endpoint must be available over WSS.
```

Gisaf currently use only "ws", it should probably use wss if the connection to the server is done with https.
