Category:		Estimated time:	0.00 hour
Target version:		Spent time:	0.00 hour
Description			
<p>There was a hectic migration of gisdb to bullseye, postgres 12, postGis 3.</p> <p>The upgrade-cluster tool didn't work, so i went with re-creating the DB, importing from backup.</p> <p>But, roles were not set (only avgis). Gisaf frontend works with the new setup.</p> <p>See the file ~postgres/import_postgres_12_prod_output for the errors.</p> <p>Also, need to check:</p> <ul style="list-style-type: none">- "cron" jobs- jupyter- backups
